

Renewable Energy Certificates (RECs)

# Reduce your Scope 2 emissions with RECs

Many businesses are looking to use renewable energy to reduce their environmental impact, but space and capital constraints can make it difficult to deploy on-site renewable generation or pursue power purchase agreements.

With Renewable Energy Certificates, businesses can reduce their scope 2 emissions to support sustainability goals, within their budget and requirements.

## WHY CONSIDER RECs:

- RECs are a straightforward way to support your company's environmental goals and commitments.
- They allow you to make environmental claims about a reduction in greenhouse gas emissions associated with your electricity use, i.e., "Scope 2" emissions.
- You can purchase RECs for a portion or all of your energy consumption.

## WHAT ARE RECs:

RECs are a type of tradable Energy Attribute Certificate (EAC). One REC represents the environmental attributes of the generation of one megawatt hour of energy produced by renewable sources.

These certificates are used to prove that your power has been generated from renewable sources.

## WHERE ARE THEY SOURCED FROM:

GoNetZero™'s RECs are issued from Sembcorp's portfolio of renewable energy projects in Singapore and the region.

We also source a variety of certificates from our trusted network of partners, according to your needs. These include certificates for different technologies, vintages, countries of origin, and registries.

## HOW TO PURCHASE RECS:

We work with you to understand your needs and goals, and then we source the best portfolio of RECs to meet those needs.

To get started, all you need to do is provide us with some basic information about your company, such as your electricity consumption, country of operations, vintage, and technology preferences, and if you are signed up to any renewable energy initiatives such as RE100. We will then work with you to develop a proposal that is tailored to your specific needs.

## WHY GONETZERO™?

Our parent company Sembcorp is an established developer of quality renewable energy projects in Asia.

We offer one of the most comprehensive range of EACs, including I-RECs, TIGRs, China GECs, Japan NFCs and J-Credits, UK REGOs, European GOs, and more.

We handle all the administration around your RECs, ensuring that they are registered, tracked, and retired on your behalf.

Our digital platform makes it easy for you to keep track of your RECs portfolio.

We have a marketplace of RECs so you can browse and purchase more RECs easily.

Our marketplace makes it easy to sell your excess RECs, generating additional revenue to support your carbon abatement projects.
